PRODUCT BOSSLADY ACADEMY (PBA)

PRODUCT CAREER INTERNSHIP PROGRAM

TECHNICAL PRODUCT MANAGEMENT TRACK

STUDENT CURRICULUM | NOVEMBER 2026 – FEBRUARY 2027

Build. Grow. Scale Your Product Journey.

1. Programme Overview

Welcome to the Technical Product Management track of the Product Career Internship Program (PCIP), powered by Product Bosslady Academy. This 12-week track helps participants bridge product thinking with technical execution. It focuses on systems thinking and working effectively with engineering teams to design, evaluate and scale technical products.

Participants will practise translating business and user needs into technical requirements, understanding system components, planning engineering execution, and identifying technical risks and improvement opportunities.

2. Programme Structure and Sessions

Session / activity	Format	Purpose
Session 1: Masterclass + Workshop	Every Saturday, 7:00 PM–9:00 PM WAT	Learn technical product concepts and apply them through guided exercises.
Session 2: Project Review	Every Sunday, 6:00 PM–7:00 PM WAT	Present progress, receive feedback and improve deliverables.
Individual technical product case study	Across 12 weeks	Analyse one real-world technical product/system as a Technical Product Manager.
Team capstone system build	Across 12 weeks	Design and document a system from requirements through architecture, APIs, execution planning and final presentation.

The end-of-year break is December 20, 2026–January 2, 2027. No regular sessions are scheduled during this period. Technical Product Management sessions: Saturdays, 7:00 PM–9:00 PM WAT (masterclass/workshop) and Sundays, 6:00 PM–7:00 PM WAT (project review and feedback).

3. Communication and Collaboration

- Slack: programme announcements, questions, resource sharing and project discussions.
- Google Meet: live classes, workshops and project reviews.
- Google Workspace: collaborative documents, diagrams, presentations and project files.
- Relevant tools may include GitHub, Jira or Linear, depending on the learning activity.

Participants are expected to attend sessions, contribute to discussions, complete assignments, collaborate with their teams, respect deadlines and apply facilitator feedback.

4. Weekly Learning Roadmap

Week	Dates	Learning focus	Expected activity / deliverable
1	Nov 2–8, 2026	Introduction to Technical Product Management	Select a real-world technical product; identify its purpose, frontend/backend/API components and dependencies. Teams define capstone concept, problem, target users and scope.
2	Nov 9–15, 2026	Systems Thinking and Architecture	Analyse/design system architecture, component relationships and data flow; create a basic ERD where relevant. Teams prepare architecture and system flow.
3	Nov 16–22, 2026	APIs and Data Flow	Define sample API endpoints, request/response structures and data flow. Teams document APIs, data exchange and integration points.
4	Nov 23–29, 2026	Technical PRD Writing	Write a feature PRD with functional and technical requirements and acceptance criteria. Teams develop the capstone PRD.
5	Nov 30–Dec 5, 2026	Agile and Engineering Workflows	Create a backlog and sprint plan; explain priorities and trade-offs. Teams prepare sprint roadmap and execution plan.
6	Dec 6–12, 2026	Engineering Collaboration	Translate product requirements into technical tasks; explore GitHub workflows, commits and pull requests. Teams define engineering workflow and communication.
7	Dec 13–19, 2026	Debugging and Issue Tracking	Write bug reports with reproduction steps and expected versus actual behaviour. Teams define issue tracking, prioritisation and resolution workflows.
Break	Dec 20, 2026–Jan 2, 2027	End-of-year break	No regular sessions scheduled. Participants may organise existing notes and project work.
8	Jan 3–9, 2027	Scalability and Performance	Identify bottlenecks and propose scaling strategies. Teams document scalability, performance and load-handling plans.
9	Jan 10–16, 2027	Security and System Reliability	Identify security risks, vulnerabilities and reliability issues. Teams prepare mitigation, security and reliability plans.
10	Jan 17–23, 2027	Full System Integration	Compile PRD, architecture, API design and system flow. Teams finalise system design, documentation and integration plan.
11	Jan 24–30, 2027	Portfolio and Career in Technical PM	Turn technical product work into a portfolio case study; prepare CV and LinkedIn materials; practise technical PM interview questions.
12	Jan 31–Feb 5, 2027	Career Readiness and Demo Day	Present the technical product, system architecture, API design, PRD and roadmap.

The roadmap is based on the submitted facilitator curriculum. The facilitator will communicate assignment deadlines and project review presentation order.

5. Individual Project: Technical Product Case Study

Each participant selects one real-world technical product or system in Week 1 and assumes the role of Technical Product Manager. They will evaluate how it works and how it could be improved.

- Understand system architecture and components.
- Evaluate APIs, data flow and integrations.
- Identify technical constraints, dependencies and bottlenecks.
- Review scalability, reliability and performance.
- Translate product needs into technical requirements.
- Identify system risks and improvement opportunities.

Week	Expected individual deliverable
1	Technical product breakdown: purpose, components and dependencies.
2	System design analysis, architecture diagram, data flow and simple ERD.
3	API design exercise with sample endpoints, inputs/outputs and data flow.
4	Feature PRD, functional and technical requirements, and acceptance criteria.
5	Product backlog, sprint plan and prioritisation rationale.
6	Translation of a product requirement into technical tasks.
7	Bug report with reproduction steps and expected versus actual behaviour.
8	Scaling analysis and proposed bottleneck improvements.
9	Technical risk analysis covering security, vulnerabilities and reliability.
10	Compiled technical documentation: PRD, architecture, API design and system flow.
11	Portfolio-ready Technical PM case study, CV and LinkedIn preparation.
12	Final explanation or presentation of individual case study, as directed by the facilitator.

6. Team Capstone Project: Technical System Build

Each team selects one new product/system in Week 1 and develops it across the programme as a technical product simulation. Teams design how the system works end-to-end, document requirements and plan engineering execution.

Stage	Team focus
Weeks 1–2	Define concept, problem, users and scope; design architecture, components, data relationships and flow.
Week 3	Define API structure, endpoints, data exchange format and integration points.
Week 4	Develop the capstone PRD and functional/technical requirements.
Week 5	Create sprint roadmap, feature priorities and engineering execution plan.
Week 6	Define engineering collaboration workflow and communication structure.
Week 7	Design issue tracking, bug prioritisation and resolution process.
Week 8	Define scalability architecture, performance strategy and load handling.
Week 9	Prepare risk mitigation, security considerations and reliability strategy.
Week 10	Integrate architecture, APIs, data flow, PRD and technical documentation.
Week 11	Prepare capstone case study and presentation materials.
Week 12	Present the product, system architecture, API design, PRD and roadmap.

Final capstone deliverables

- Technical Product Strategy.
- System architecture, including data flow and components.
- Product Requirements Document (PRD).
- API design and documentation.
- Engineering execution plan.
- Scaling and performance strategy.
- Risk and reliability framework.
- Final technical product demonstration.

Facilitators will assess project deliverables and each participant's demonstrated contribution. Team membership alone does not guarantee equal marks.

7. Assessment and Grading System

PCIP uses a 300-mark assessment system to encourage consistent participation, practical application, timely delivery and professional conduct. The overall assessment structure is intended to remain consistent across all five tracks, while assignments and milestones are track-specific.

Category	Assessment components	Marks	Weight
Weekly learning and individual assignments	12 weekly assignments × 10 marks	120	40%
Team capstone project	Milestones/reviews (40); final deliverable/demo (35); product thinking/feasibility (15); collaboration/contribution (10)	100	33.3%
Individual final project and portfolio	Project quality/completeness (20); analysis/decisions (10); documentation/presentation (10); explain and defend decisions (10)	50	16.7%
Attendance and participation	24 scheduled sessions × 1 mark (24); participation, peer feedback and professional conduct (6)	30	10%
TOTAL		**300**	**100%**

7.1 Weekly assignment assessment criteria

Each assignment is assessed out of 10 marks, considering:

- Understanding of the topic.
- Quality of analysis and problem-solving.
- Application of relevant concepts, tools and frameworks.
- Practical relevance and quality of the deliverable.
- Timely submission and adherence to instructions.

7.2 Team capstone assessment criteria

Facilitators assess progress throughout the programme. Criteria include milestone quality, final system documentation and demonstration, technical and product reasoning, feasibility, collaboration and each participant's contribution.

7.3 Individual project and portfolio assessment criteria

The individual case study should demonstrate understanding of system structure, APIs and data flow, technical constraints, requirements, reliability and opportunities for improvement.

7.4 Attendance and participation

The assessment allocates 24 marks to attendance across 24 scheduled sessions (two sessions per teaching week for 12 weeks, excluding the break) and six marks to active participation, peer feedback and professional conduct. Technical track sessions are scheduled for Saturdays, 7:00 PM–9:00 PM WAT, and Sundays, 6:00 PM–7:00 PM WAT

.

8. Final Grade Classification

Final percentage	Grade
90–100%	A+
80–89%	A
70–79%	B+
60–69%	B
50–59%	C
40–49%	D
30–39%	E
Below 30%	F

Final percentage = (Total marks earned ÷ 300) × 100. Example: 246 ÷ 300 × 100 = 82%, which corresponds to Grade A.

9. Programme Rules and Completion Requirements

- Minimum passing score: at least 50% overall (150 out of 300 marks).
- Attendance: at least 80% of scheduled sessions is required to qualify for a certificate, subject to approved exceptions under PBA policy.
- Deadlines: assignments must be submitted by the stated deadlines. Any late-submission penalties must be communicated before an assignment is due.
- Original work: participants must submit their own work, acknowledge sources and disclose AI assistance where required. Plagiarism, fabricated work or misrepresentation may result in mark deductions or further action under programme policy.
- Project contribution: participants must demonstrate their own contribution; persistent non-participation may affect individual marks.
- Final presentation: participants must present or defend their individual work and contribute to the team capstone presentation.
- Extensions and missed assessments require approval from PBA or the programme coordinator.
- Facilitators may request revisions where deliverables do not meet stated requirements.

10. Expected Programme Outcomes

By the end of the programme, participants are expected to have:

- A technical product documentation package, including PRD, architecture and APIs.
- A strong understanding of systems, APIs and engineering workflows.
- The ability to translate product needs into technical execution.
- Hands-on experience in system design and scalability.
- A portfolio-ready Technical PM case study.
- Greater confidence working with engineering teams.
- A clearer pathway towards career readiness in Technical Product Management.

11. Certificate and Recognition

Participants who meet the programme's attendance and assessment requirements will qualify for a Certificate of Completion. Outstanding participants may be considered for recognition based on the quality of their work, consistency, teamwork and professionalism. Additional opportunities such as recommendation letters, internships, volunteer roles or future PBA opportunities may be available but are not guaranteed.

Conclusion

The Technical Product Management track is designed to help participants understand the technical structure behind products and communicate effectively with engineering teams. Participants are encouraged to ask questions, document decisions clearly, consider trade-offs, collaborate responsibly and apply feedback.

Best regards,
